## **DETAILED ACTION**

### ***Drawings***

1. The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, the substrate, active layers, barrier layers, contact means, photo-detector, image-sensing and optical communications, light-valve, solid state reflection displays and optical communications, solar cell, light emitter, superlattices, MIS, MOS, and emission displays must be shown or the feature(s) canceled from the claim(s). No new matter should be entered.

A proposed drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance.

2. The drawings are objected to as failing to comply with 37 CFR 1.84(p)(5) because they include the following reference sign(s) not mentioned in the description: 1-58. A proposed drawing correction, corrected drawings, or amendment to the specification to add the reference sign(s) in the description, are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance.

### ***Claim Rejections - 35 USC § 112***

3. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Art Unit: 2828

4. Claims 1-21 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 1 recites "contact means are selected according to band-alignment and work-function...involved in photon-absorption and photon-emission optic-electronic transistions" in the last 4 lines. It is unclear what further structural limitations are being implied by that recitation. Claims 2-21 are rejected for the same reason.

Each of claims 5, 6, 10, 12, 13, 14, 15, 16, 17, 18, 19, 20 recites "adapted..." in line 1. It is unclear what further structural limitations are being implied by those claims.

### ***Claim Rejections - 35 USC § 102***

5. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

6. Claims 1-21 are rejected under 35 U.S.C. 102(b) as being anticipated by Ishikawa et al (5,696,389). Ishikawa et al discloses the claimed invention. Note figure 23 which illustrates an optoelectronic device comprising a substrate (301), a number of different active layers (304,308,313), a number of different barrier layers (303,305, 307, 309, 312,314), and contact means (315,316,318,320).

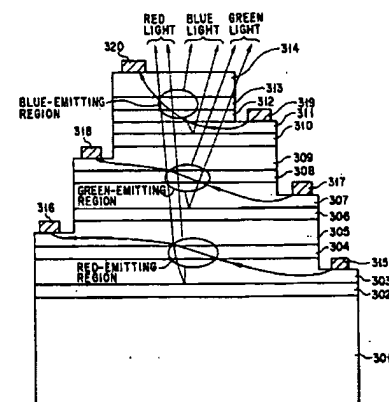

FIG. 23

Regarding claims 5, 6, 10, 12, 13, 14, 15, 16, 17, 18, 19, 20 it has been held that the recitation that an element is "adapted to" perform a function is not a positive limitation but only requires the ability to so perform. It does not constitute a limitation in any patentable sense. *In re Hutchison*, 69 USPQ 138.
